

Wildlife Friendly Addingham

Making space for nature @ the Recreation Ground

The snow melted just in time for us to hold a 'socially distanced' planting day this January. Bradford Council's Tree & Woodland Team designed the planting plan and supplied the trees.

The steepest part of the bank has been planted up with a mixture of native trees and shrubs, which will provide good foraging for pollinators and great habitat for birds.

We took care to leave the popular sledging slope at the eastern end open!

Tackling Climate Change

Addingham Environment Group is committed to reducing carbon emissions, and trees as 'natural carbon stores' can help us do that.

We are pleased to be part of Bradford Council's tree planting initiative. Tree planting and peat moor restoration to store carbon, benefit wildlife and reduce flooding, are two of the actions the District Council is taking on climate change. [Click here](#) to read more on the Council's website.

This is part of the Management Plan we've agreed with the Parish Council to create wildlife friendly habitat and combat climate change at this greenspace.
